LSI Logic Storage Systems Dives into Shared Storage Pools with Sanbolic

Certification of combined solution brings high performing shared storage platform to customers.

MILPITAS, Calif. - April 15, 2004 -- LSI Logic Storage Systems, Inc., a leader in delivering technology that enables high performance, highly scalable storage for the open enterprise, today announced that the Sanbolic Melio File System (FS) and LaScala Volume Manager software have achieved compatibility certification with the company's SANtricity Storage Manager software and storage controllers. This certification enables end users to utilize LSI Logic Storage Systems' modular technology in building highly reliable and flexible storage pools for high performance computing environments.

Sanbolic's software solutions provide the capability to meet the requirements of high performance applications such as High Definition (HD) video and clustered file sharing environments requiring concurrent read and write access to files on a SAN. HD video requires extremely high throughput to each server connected to the shared storage system. Melio FS and LaScala enable applications to utilize multiple storage subsystems to deliver data in a shared infrastructure at rates not previously available. For example, an initial customer deployment has demonstrated concurrent read and write access in excess of 200 megabytes/second per node to a large shared volume.

“Sanbolic is pleased to be working with LSI Logic Storage Systems to deliver solutions that meet the rigorous requirements of the most demanding applications in the data center,” said Chris Hurley, vice president of sales and marketing, Sanbolic. “The certification requirements provide

customers the assurance that they are getting a reliable solution that delivers unparalleled performance.”

The LSI Logic Storage Systems Certified Compatible process requires extensive testing to assure stability and interoperability using heavy loads typical of high performance enterprise computing. Sanbolic is a leading provider of software for networked storage that simplifies data storage management, increases system flexibility and enables high bandwidth shared access to data. The Sanbolic products compatible with LSI Logic Storage Systems technology include Melio FS, an advanced symmetrical cluster file system, and LaScala, a symmetrical cluster volume manager.

"LSI Logic Storage Systems is dedicated to meeting the needs of high performance computing environments, including those with HD video and clustered computing applications," said Julie Ryan, manager of alliances, LSI Logic Storage Systems. "With this certification, our partners are now able to deliver tremendous business and technical benefits to these customers through a shared storage architecture.”

About LSI Logic Storage Systems, Inc.

LSI Logic Storage Systems, Inc., a subsidiary of LSI Logic Corporation, designs and manufactures high performance modular enterprise storage platforms and storage management software that is delivered to end users through strategic partners. IBM, SGI, StorageTek and Teradata are among the partners who deliver total solutions with unique combinations of hardware, software and services for applications including transaction processing, email, data warehousing and scientific research. For more information, please call 1-888-638-2786 or 1-408-433-8686 or visit www.lsilogicstorage.com.

About LSI Logic Corporation

LSI Logic Corporation (NYSE: LSI) is a leading designer and manufacturer of communications, consumer and storage semiconductors for applications that access, interconnect and store data, voice and video. In addition, the company supplies storage network solutions for the enterprise. LSI Logic is headquartered at 1621 Barber Lane, Milpitas, CA 95035. www.lsilogic.com

About Sanbolic, Inc.

Sanbolic, Inc. is a privately held company located in Watertown, Massachusetts. Sanbolic's products address the growing customer need for tools that simplify data storage management, increase system flexibility, and enable high bandwidth shared access to data. The product offerings are Melio FS, an advanced symmetrical cluster file system, LaScala, a symmetrical cluster volume manager, and Kayo, volume sharing software. Sanbolic distributes its products worldwide through a network of distributors, OEMs, VARs and system integrators. Further information about Sanbolic can be found on its website www.sanbolic.com.
