Sanbolic Announces Support for Microsoft Cluster Services

Clustered File System provides improved flexibility for server clusters

Watertown, MA June 12, 2006 – Sanbolic, Inc., a leading developer of software to simplify and share SAN storage, today announced support for Microsoft Clustering Services with its Melio Clustered File System and LaScala Volume Manager. Sanbolic’s software is designed to enable shared access to data on a SAN, hence server clusters can be assigned concurrent shared access to a SAN volume, simplifying cluster configuration, and supporting application scalability for cluster aware applications.

“High availability clusters are important in datacenter applications. Our file system enables users to simplify their infrastructure and installation while improving reliability, uptime and hardware utilization, and still take full advantage of Microsoft Cluster Services,” said Momchil Michailov, a founder of Sanbolic. “Our products allow access to volumes on shared storage to be centrally assigned using Windows ACLs (Access Control Lists) and Active Directory. They provide concurrent access to shared data for running multiple instances of cluster aware applications while fully benefiting from the ability to use Microsoft Cluster Services across all machines in the cluster. Melio FS and LaScala also allow users to use shared infrastructure and Microsoft Cluster Services in the traditional two node approach in cases where the applications would not support more than one server accessing the data at any given time.”

“For customers looking for higher performance file servers, or which have multi-instance aware applications, Sanbolic is offering some exciting new options” said Kurt Friedrich, Product Unit Manager of HA Clustering Technology for Microsoft. “We are pleased to have Sanbolic, a Microsoft Certified Partner, enhancing the capabilities and power of the Windows Server platform.”

Sanbolic software currently supports Microsoft Windows 2000 Server, Windows XP and Microsoft Windows Server 2003, including Windows Server 2003 R2. Sanbolic

distributes its product solutions worldwide through a network of distributors, OEMs, VARs and system integrators.

Sanbolic will showcase the solution at MS Tech Ed 2006 Booth #1116 at the Boston Convention and Exhibition Center, Boston MA, June 11-16.

About Sanbolic, Inc.

Sanbolic, Inc is a Watertown, Massachusetts-based company that provides software for sharing and simplifying shared SAN storage environments. Networked storage is one of the fastest growing segments of the information technology market. Sanbolic products address the growing customer need for tools that simplify data storage management, increase system flexibility and enable shared access to information in a reliable, scalable and secure data environment. Further information about Sanbolic can be found on its website www.sanbolic.com.
