**Sanbolic Announces Quality of Service for Adobe Users**

***HD Shared SAN Solution with Guaranteed Bandwidth  
to Adobe Premiere Pro 2.0 Users***

Las Vegas, NV April 23, 2006 –Sanbolic, Inc., a leading developer of software to simplify and share SAN storage, today announced the release of the Quality of Service (QoS) component in Melio FS shared file system. QoS allow the users to allocate bandwidth dynamically to specific workstations in a workgroup environment.

Melio FS enables shared access to content files on SANs built using industry standard hardware in post production facilities. Shared access to content files on the SAN improves the work flow process by allowing content to be digitized centrally and eliminating the need to move very large video files among workstations. It also reduces the time to get programming on the air by allowing multiple editors to access content files for a project simultaneously, and simplifies versioning control. Sanbolic's volume manager LaScala allows the performance of several storage arrays to be combined into a single shared pool that will support the bandwidth needed by uncompressed HD video or 2k film intermediate production. It also provides volume access to be assigned centrally.

"Together, Melio FS and Adobe Premiere Pro 2.0 provide a cost-effective workgroup editing solution that allows large facilities to manage their storage more efficiently and eliminates the need to replicate or move files", said Giles Baker, Sr. Product Manager for Adobe Premiere Pro. "This improves the workflow in Adobe-based post-production houses and allows our customers to scale their HD and 2K projects while optimizing performance."

"Our HD SAN consists of six post production workstations running Adobe Premiere Pro 2.0, all connected to the shared storage," said Michael Kolowich, president and executive producer of DigiNovations, an independent video production facility in Concord, Massachusetts. "Sanbolic's Melio FS and LaScala volume manager make it possible for all our editors to have simultaneous access to the files on the common storage. LaScala lets us centrally manage and flexibly expand the system when we are ready without having to interrupt our work."

The Quality of Service component has been developed to fulfill requirements of customers in the broadcast and post production markets. The feature was added to provision shared storage

centrally while guaranteeing bandwidth to and from certain workstations during editing and broadcast. The HD SAN solution can be seen at IBM's booth #SU2976.

Sanbolic software currently supports Microsoft Windows 2000 Server, Windows XP and Microsoft Windows Server 2003, including Windows Server 2003 R2. Sanbolic distributes its product solutions worldwide through a network of distributors, OEMs, VARs and system integrators.

**About Sanbolic, Inc.**

Sanbolic, Inc is a Watertown, Massachusetts-based company that provide software for sharing and simplifying shared SAN storage environments. Networked storage is one of the fastest growing segments of the information technology market. Sanbolic products address the growing customer need for tools that simplify data storage management, increase system flexibility and enable shared access to information in a reliable, scalable and secure data environment. Further information about Sanbolic can be found on its website [www.sanbolic.com](http://www.sanbolic.com).
