## Sanbolic provides Clustered File System for Windows Server 2008 Installations

*Concurrent shared access to SAN storage volumes provides application scalability, high availability, and simplified virtual image management and migration for the Windows Server 2008*

**WATERTOWN, Mass. April 8, 2008** – Sanbolic, Inc., a leading developer of software to simplify and share SAN storage, today announced that Melio clustered file system is now available for Windows Server 2008. “With the installation option of Server Core, Sanbolic Melio FS is now available for all supported Microsoft operating systems” said Momchil Michailov, a founder of Sanbolic.

Sanbolic’s Melio clustered file provides concurrent read and write access from multiple servers to storage volumes on SAN storage. This enables scalability of applications such as file serving or web serving by enabling multiple servers to utilize a common file system, as well as improved high availability architectures and improved Hyper-V migration solutions. Melio clustered file system is designed to run on a Windows Server 2008 Server Core installation. Server Core is an installation option for Windows Server 2008 that provides a minimal environment for running specific server roles, which reduces maintenance and management requirements and improves security by reducing the attack surface.

“Windows Server 2008 is a secure and proven platform for business critical applications,” said Tony de Freitas, director of Windows Server Marketing at Microsoft. “We’re excited that Sanbolic’s clustered file system is available and provides our mutual customers with a solution for mission critical environments that leverages Windows Server 2008 advancements in high availability and reliability.

Sanbolic software currently supports Windows XP, Windows Vista, Windows Server 2000, Windows Server 2003 and Windows Server 2008. Sanbolic distributes its product solutions worldwide through a network of distributors, OEMs, VARs and system integrators.

Sanbolic will be exhibiting at Storage Networking World in the Microsoft Pavilion on April 8 and 9, 2008.

**About Sanbolic, Inc.**

Sanbolic, Inc is a Watertown, Massachusetts-based company that provides software for simplifying and sharing SAN storage. Sanbolic's products extend the capability of Windows applications by allowing SAN storage to be easily administered, expanded and reassigned, while supporting shared data access to improve application availability and/or application scalability. Further information about Sanbolic can be found on its website [www.sanbolic.com](http://www.sanbolic.com).
